

BIOMETRICS SCREENING- EMPLOYER SERVICES

We're passionate about preventive services that have the power to save lives. Did you know that 75% of health care costs are attributed to chronic conditions that are preventable? A biometrics screening has the ability to inform employees about risk factors associated with chronic conditions like heart diseases, diabetes, and cancer. For \$45/person you can provide health screenings for your workforce that can gently and respectfully alert them to risk factors.

Each Screening Includes:

ASSESSMENT

The screening result details are returned to the employee.

TESTING

Lipids and glucose with immediate results. If any glucose results are abnormal, additional Hemoglobin A1c is done immediately at no extra charge.

ADDITIONAL TESTING AVAILABLE:

Renal function, liver disease markers, thyroid and anemia screening can be added as an option. Cotinine can be tested in urine to detect people who smoke or vape nicotine containing products.

INTAKE FORM

- > Complete past medical history.
- > Alcohol, tobacco, and drug questionnaires.
- > Preventive services evaluation.

VITALS

Blood pressure, height & weight.

Patients

Each participant will receive a one-page results summary with a risk assessment and generic advice on management. An enhanced multi-color, multi-page document can be added.

Employer

Specific information will be reported to the employer regarding which employees have participated in the program. Aggregate data will be presented on employee risk factors. Due to regulations, health information will not be disclosed to the employer.

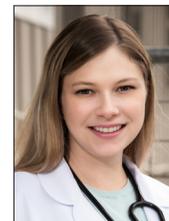

Health Professionals

A separate document will be generated indicating relevant risks identified for direct transmission to the Primary Care Provider (PCP) of those individuals who have pre-existing primary care relationship.
